DESIGN 224

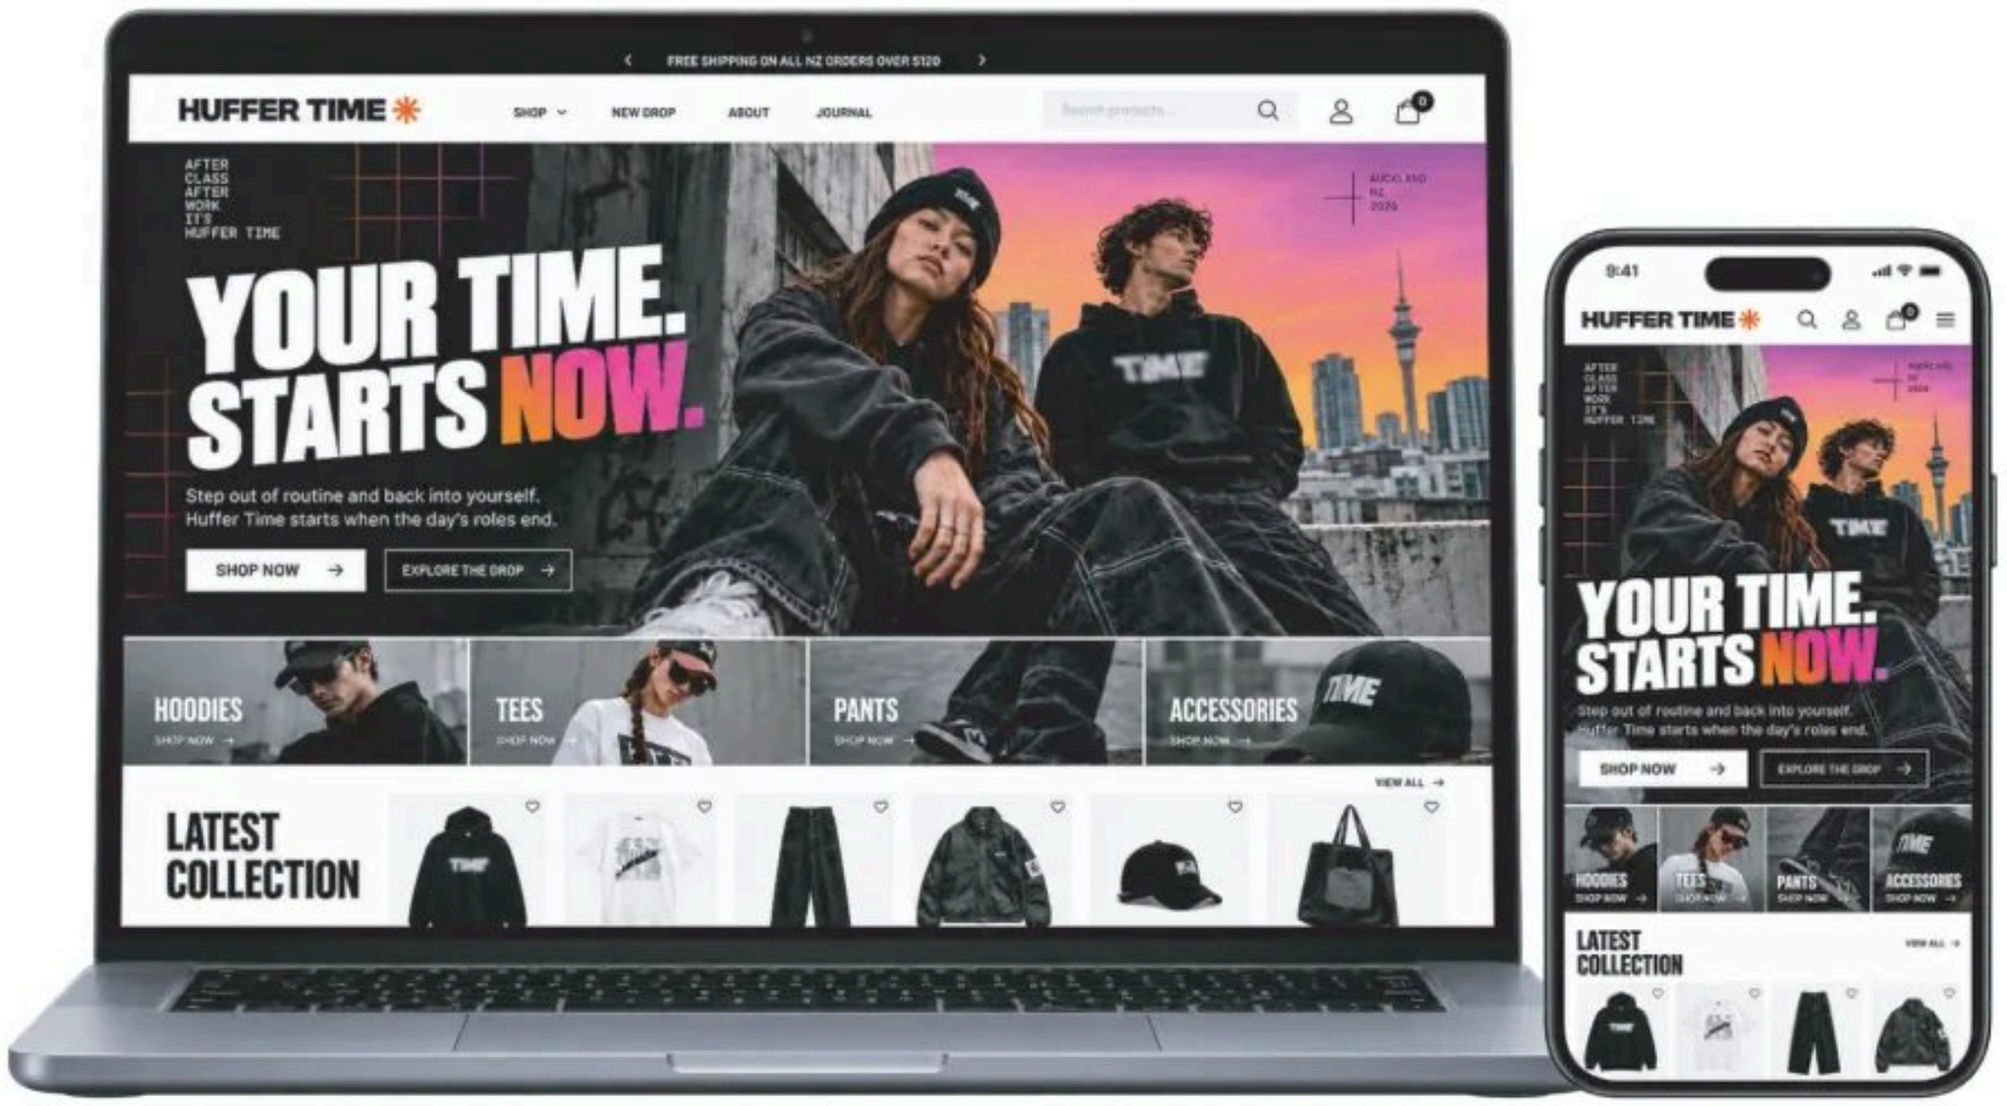

PROJECT INTRODUCTION

HUFFER TIME is a campaign created for the New Zealand streetwear brand Huffer. The concept explores the contrast between the restrictions of school or work and the freedom people experience afterwards. It encourages young people to express their individuality and enjoy their own time through fashion.
In Assignment 3, this idea is developed into an online store, physical packaging, and a promotional poster.

COMMUNICATION GOAL

The goal is to connect with students and young working adults by presenting Huffer as part of their personal freedom and self-expression. Through consistent colours, typography, imagery, and layouts, the campaign creates a recognisable visual identity across digital and physical experiences.

ONLINE STORE OVERVIEW

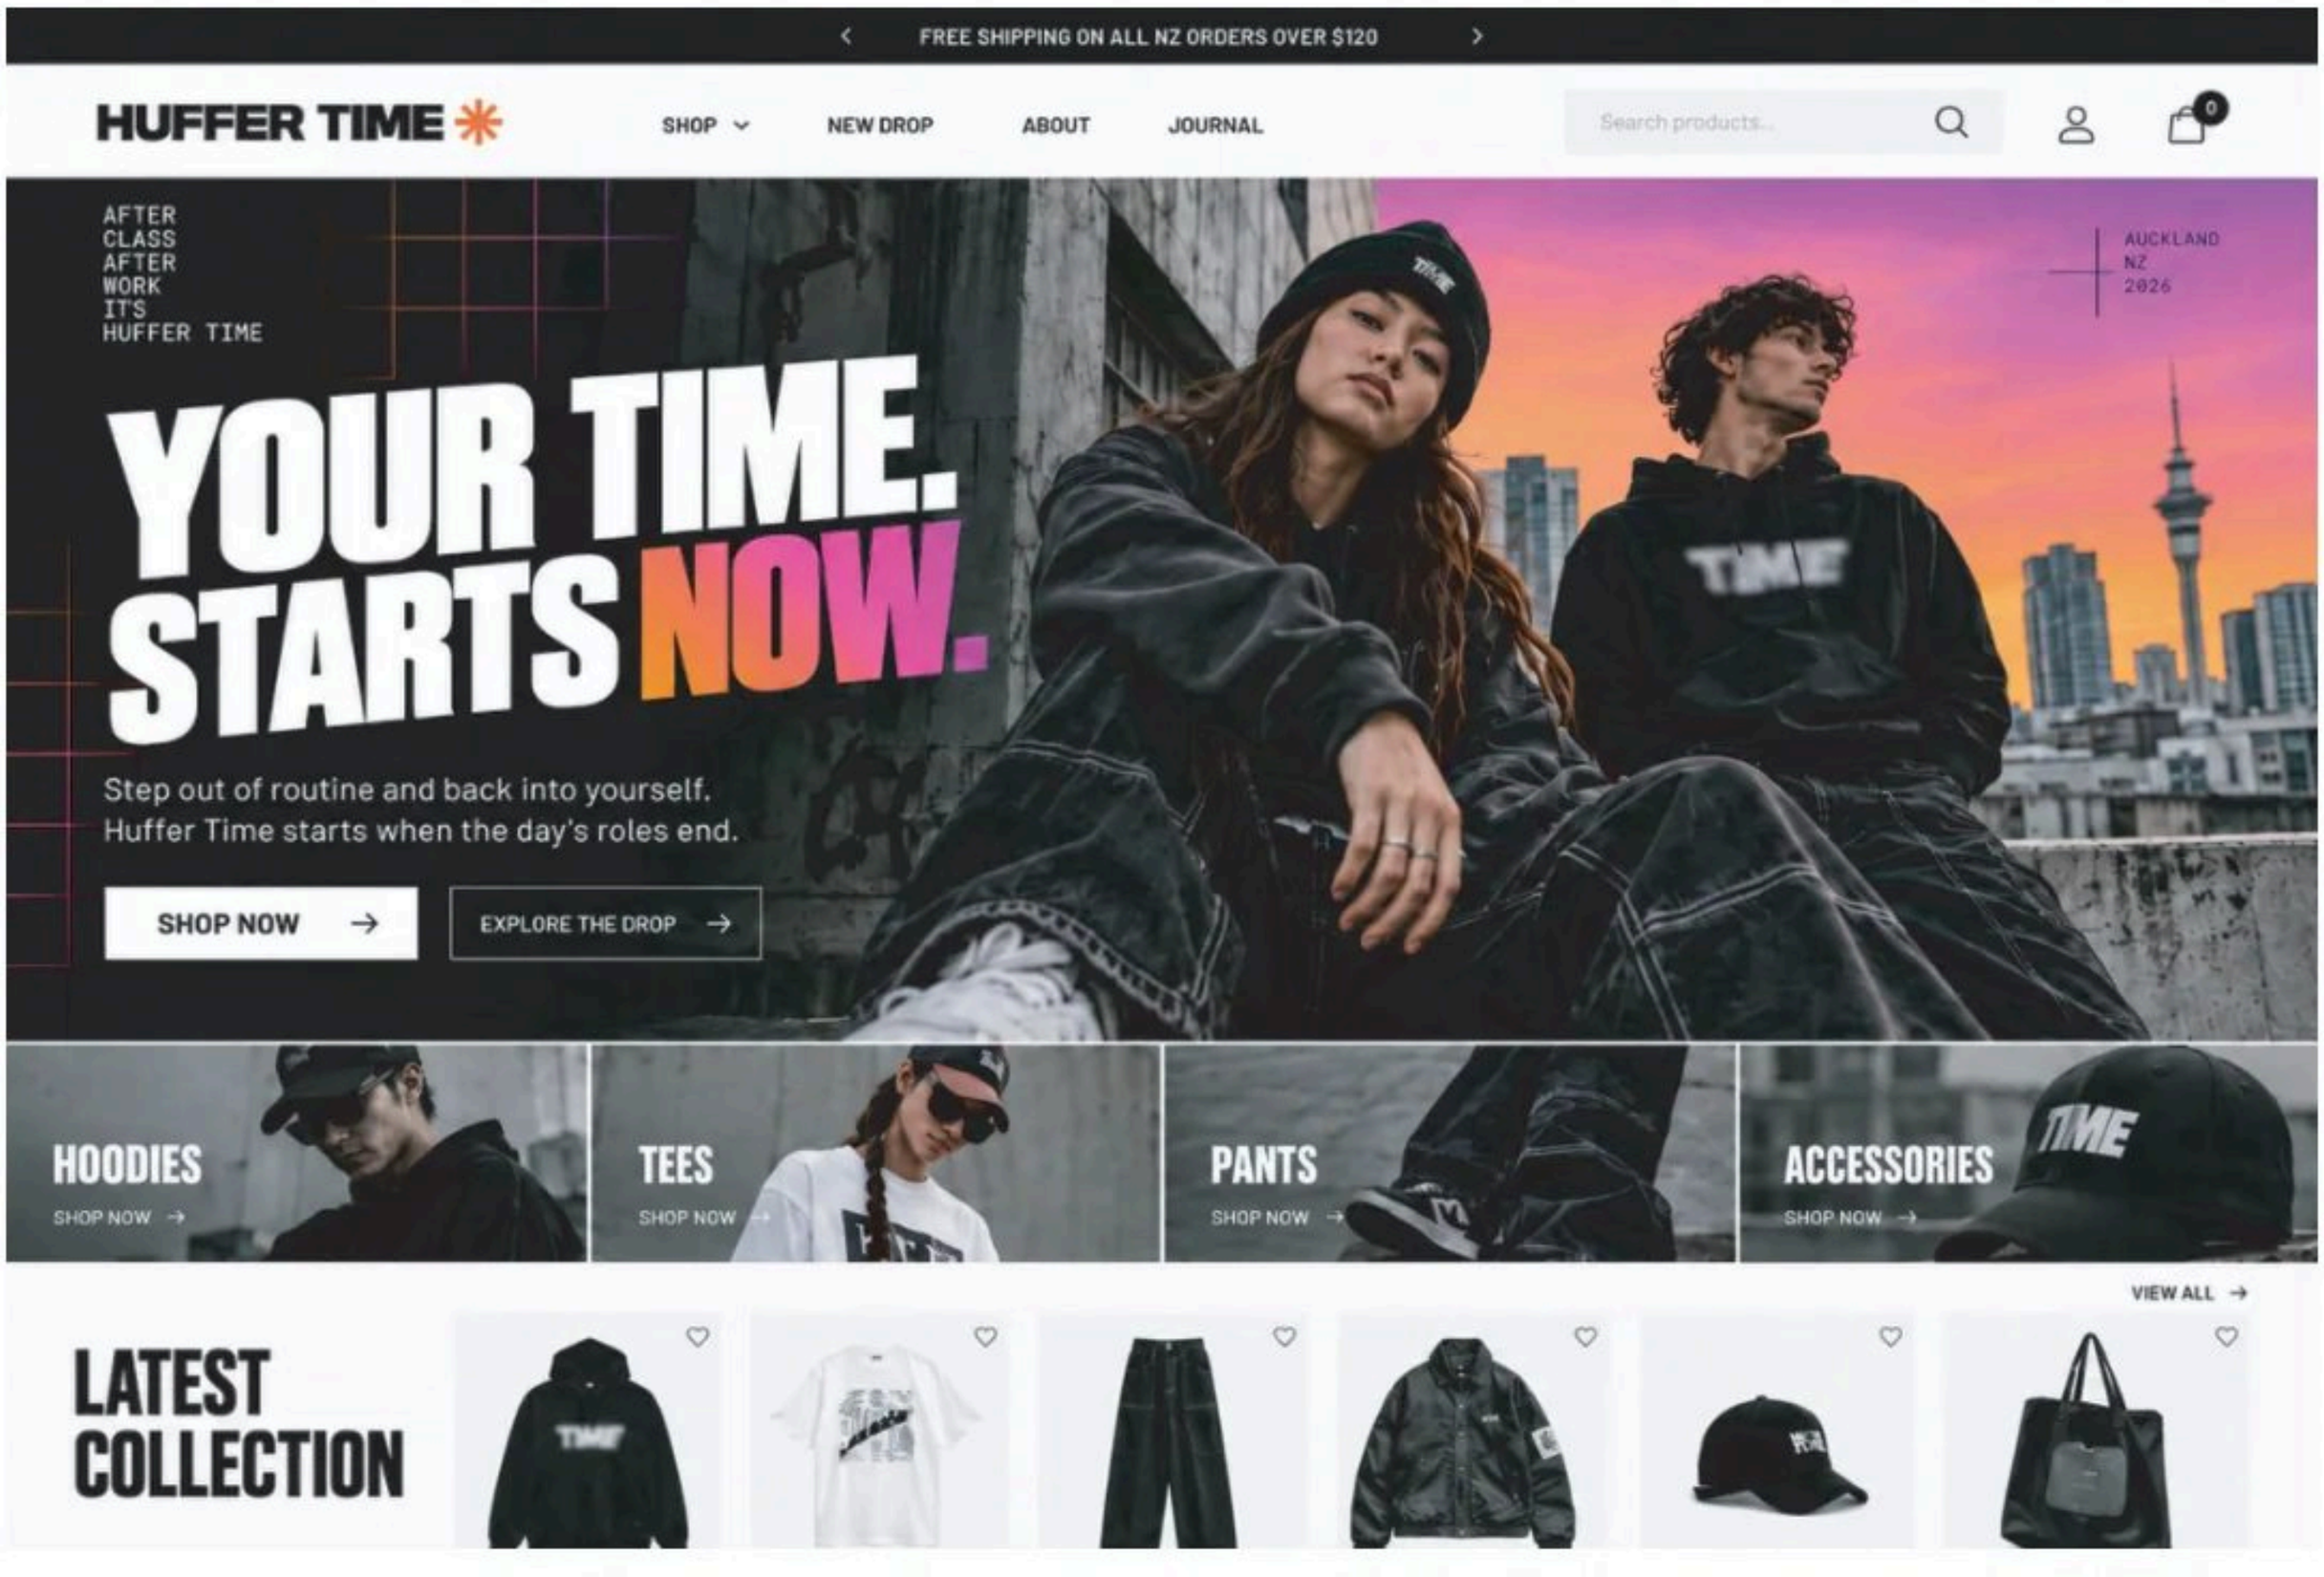

HUFFER TIME — DIGITAL EXPERIENCE

The Huffer Time online store brings the campaign concept into a digital shopping experience. It continues the idea of freedom and self-expression after school or work, creating a space where young people can explore fashion that reflects their individuality.

The website uses bold typography, clean layouts, strong imagery and the signature orange, pink and purple gradient to maintain the campaign's visual identity. I wanted the design to feel energetic and expressive without making the shopping experience too complicated.

DESIGN OBJECTIVES

Visual Identity: Maintain a consistent Huffer Time style throughout the website.
User Experience: Create a clear and easy-to-navigate shopping experience.
Brand Expression: Connect streetwear fashion with freedom and individuality.

HOMEPAGE DESIGN

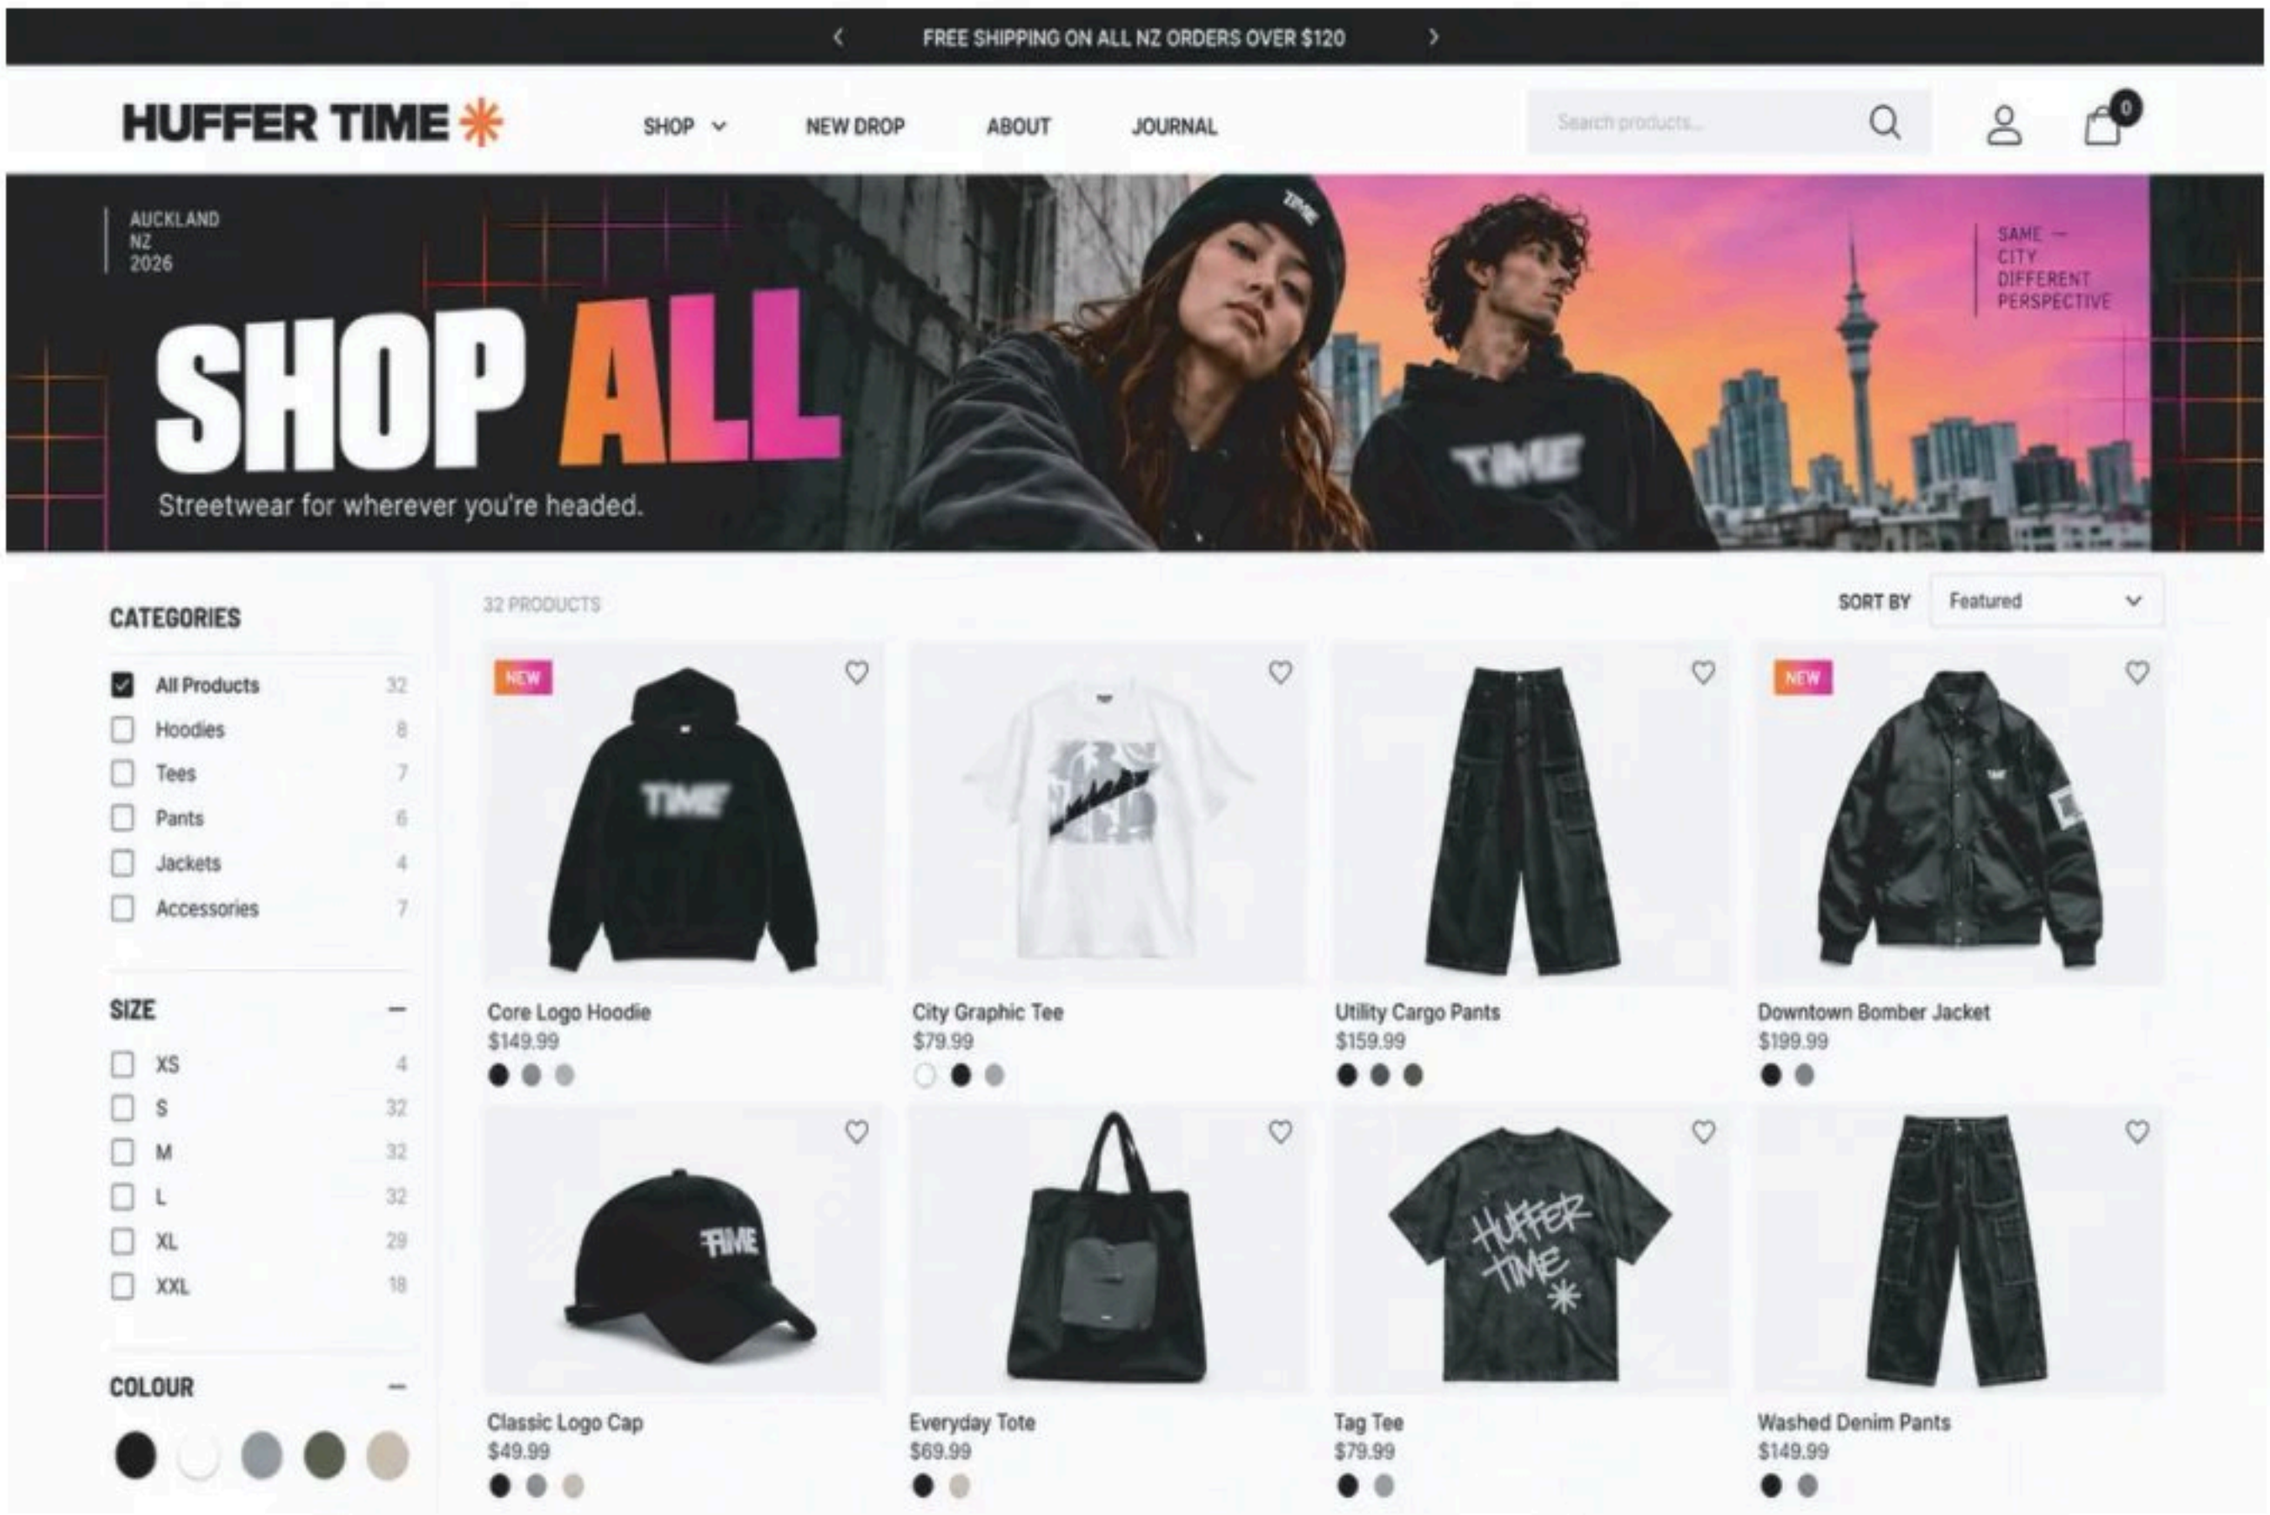

The homepage is designed to create a strong first impression and introduce the Huffer Time campaign. I used bold typography, streetwear photography and the signature orange, pink and purple gradient to create an energetic visual style. The main message, "YOUR TIME STARTS NOW," highlights the idea of freedom and self-expression after school or work.

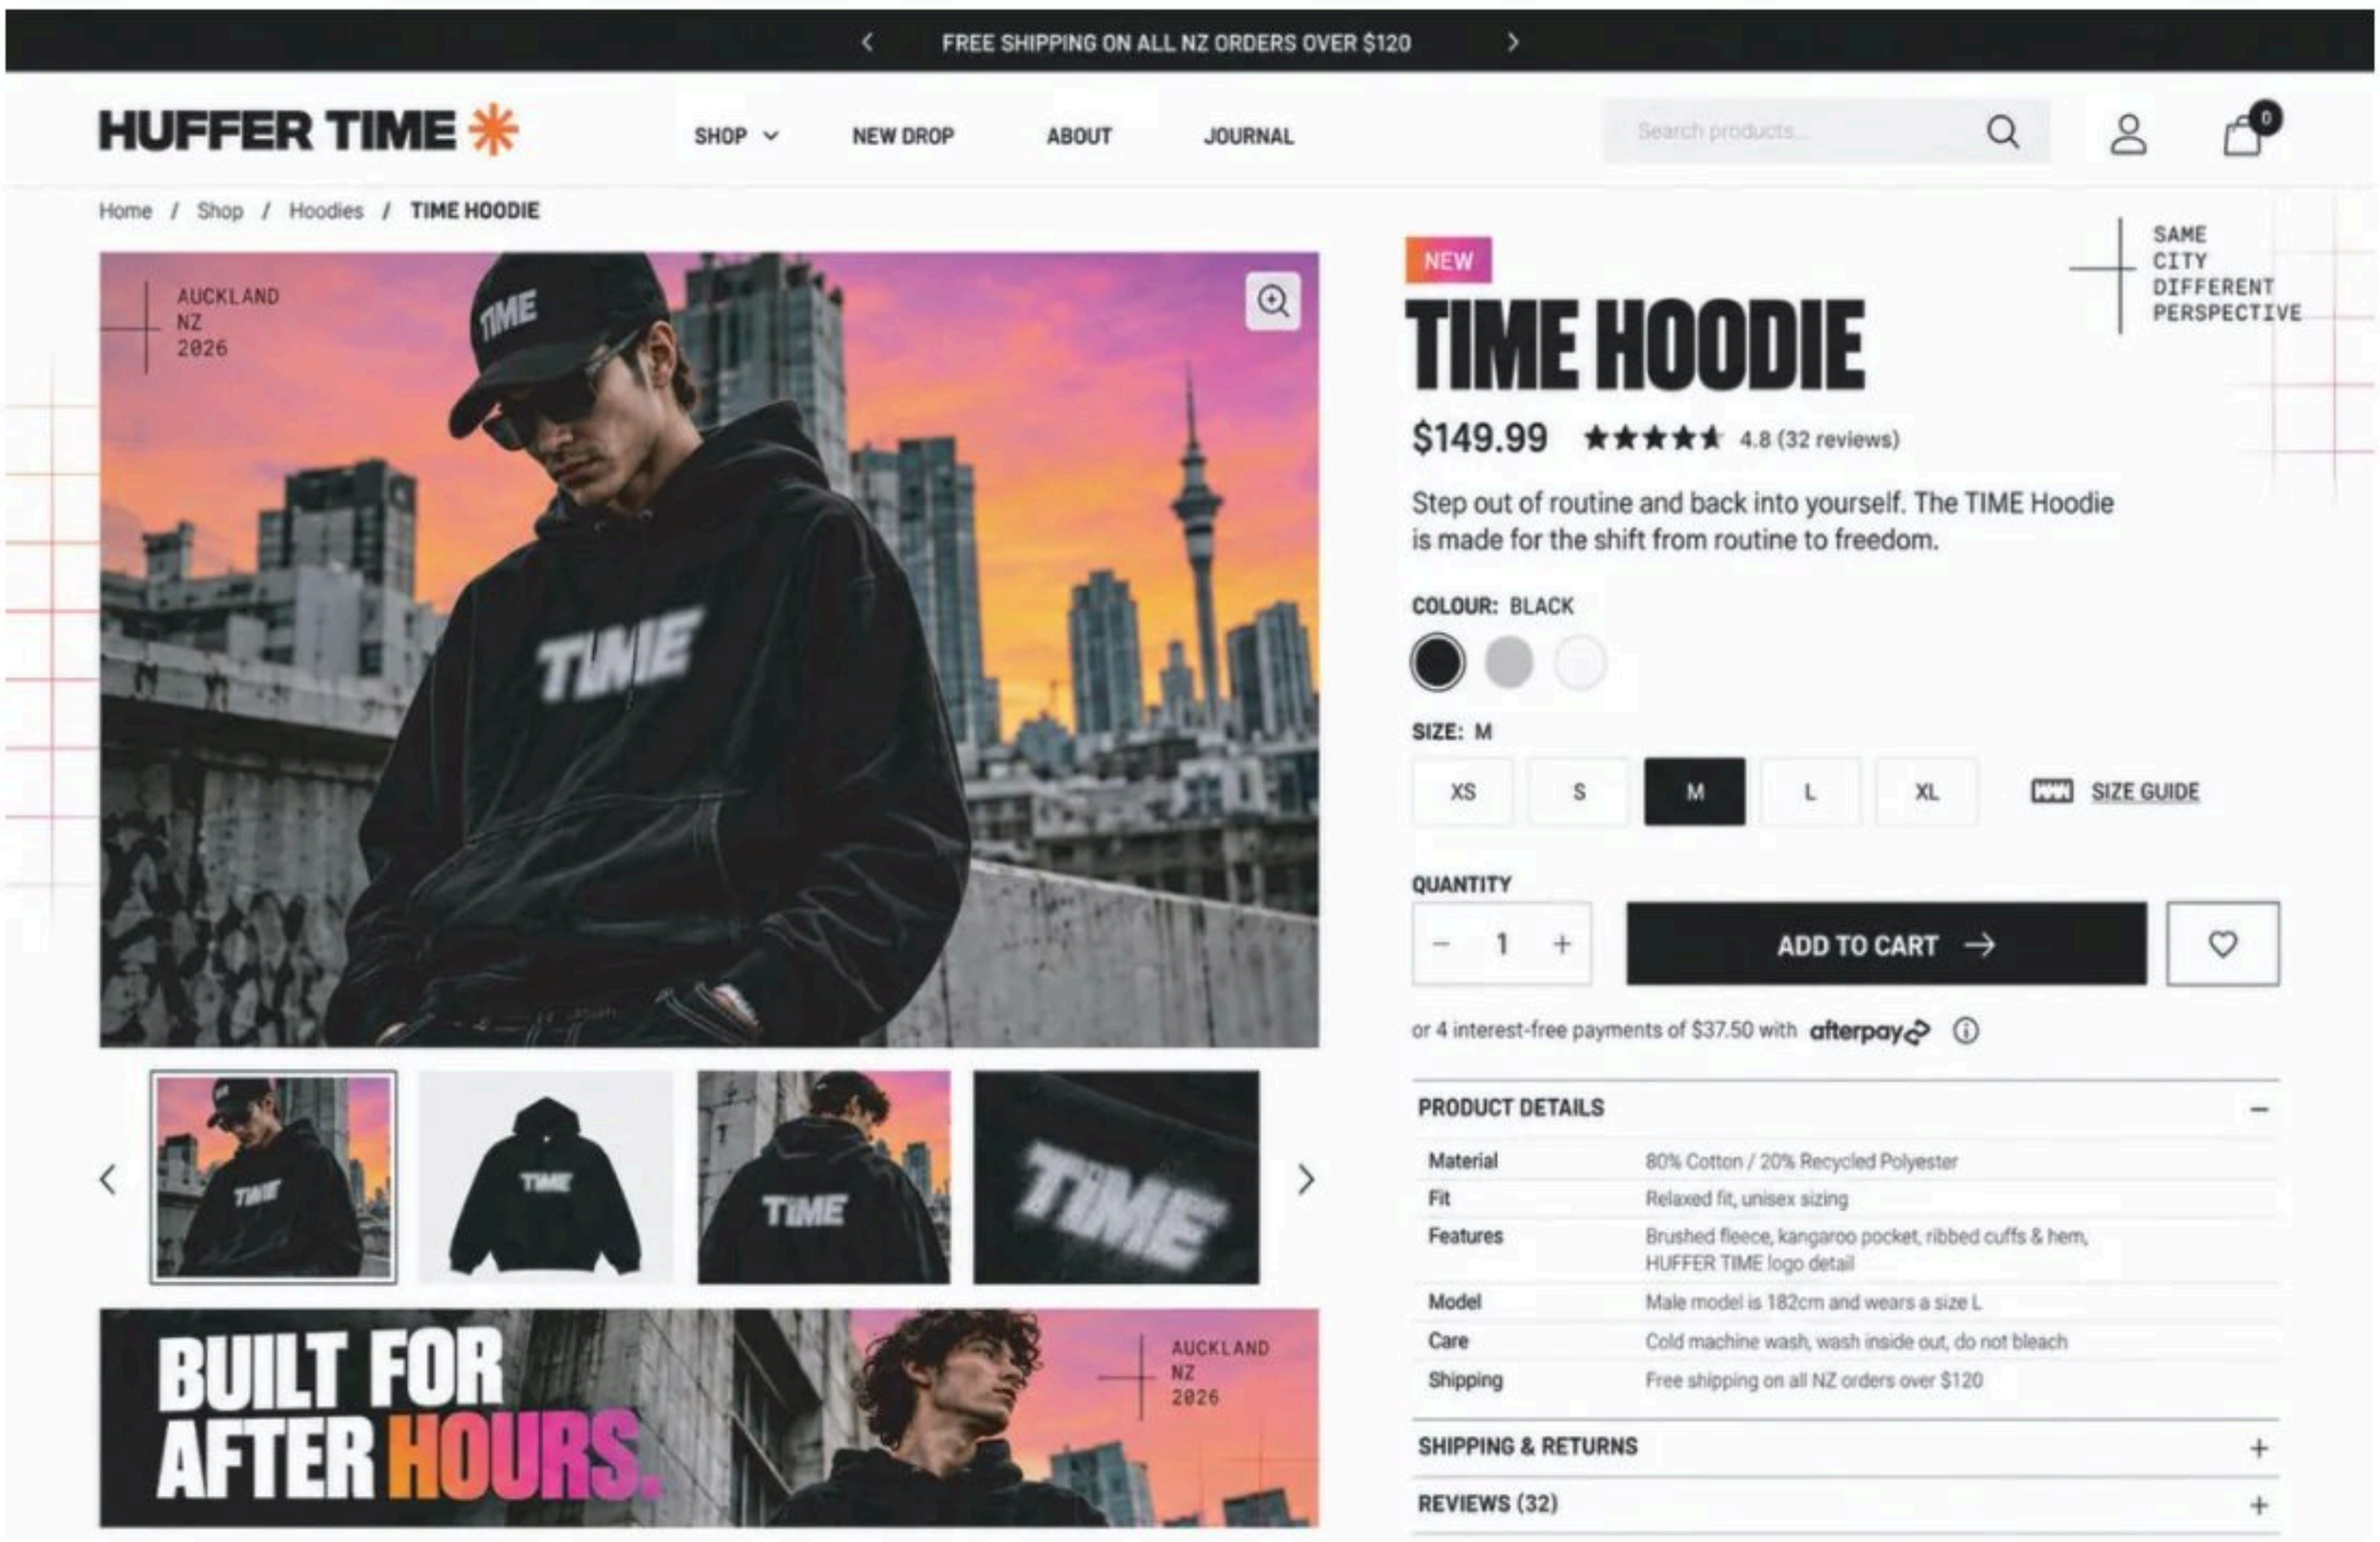

- Campaign Introduction: The main banner introduces Huffer Time through lifestyle photography and a strong campaign message, creating an immediate connection with the target audience.
- Clear Navigation: The top navigation provides direct access to Shop, New Drop, About and Journal, helping visitors quickly find different sections of the website.
- Shopping Entry Points: Clothing categories and the Latest Collection section allow customers to move directly from the campaign introduction to exploring products.
- Visual Direction: The contrast between expressive campaign imagery and structured product sections creates an engaging first impression without making the homepage difficult to navigate.

PRODUCT COLLECTION

The Shop Page continues Huffer Time's bold streetwear style while providing a clean and organised shopping experience. I used a large “SHOP ALL” banner with campaign photography and the signature gradient to connect the page with the overall brand identity. Below the banner, I kept the layout simple so users could focus on exploring the products.

- Product Filtering: Category, size and colour filters are placed on the left side, allowing customers to narrow down the collection based on their preferences.
- Product Comparison: A consistent four-column grid displays product images, names, prices and colour options, making it easier to compare different items.
- Sorting & Browsing: The product count and sorting menu help customers understand the collection and adjust how products are displayed.
- Shopping Convenience: Wishlist icons and “NEW” labels help customers identify interesting products and keep track of items they may want to purchase later.

The Product Detail Page focuses on how customers explore a product before making a purchase. Instead of only showing the hoodie through standard product images, Huffer uses lifestyle photography, different viewing angles and close-up details to help customers imagine how it looks when worn.

Important purchasing information, including the product name, price, colour options and size selection, is placed together on the right side to make the shopping experience clearer and more convenient.

- Product Photography: A large main image and smaller thumbnails show the hoodie from different angles, including close-up details and lifestyle shots.
- Shopping Experience: Colour options, size selection, quantity controls and a clear “ADD TO CART” button make the purchasing process straightforward.
- Product Information: The price, reviews, material details, sizing information and shipping options are organised to help users make informed decisions.
- Brand Consistency: The “BUILT FOR AFTER HOURS” banner, bold typography and sunset imagery reinforce the Huffer Time identity throughout the page.

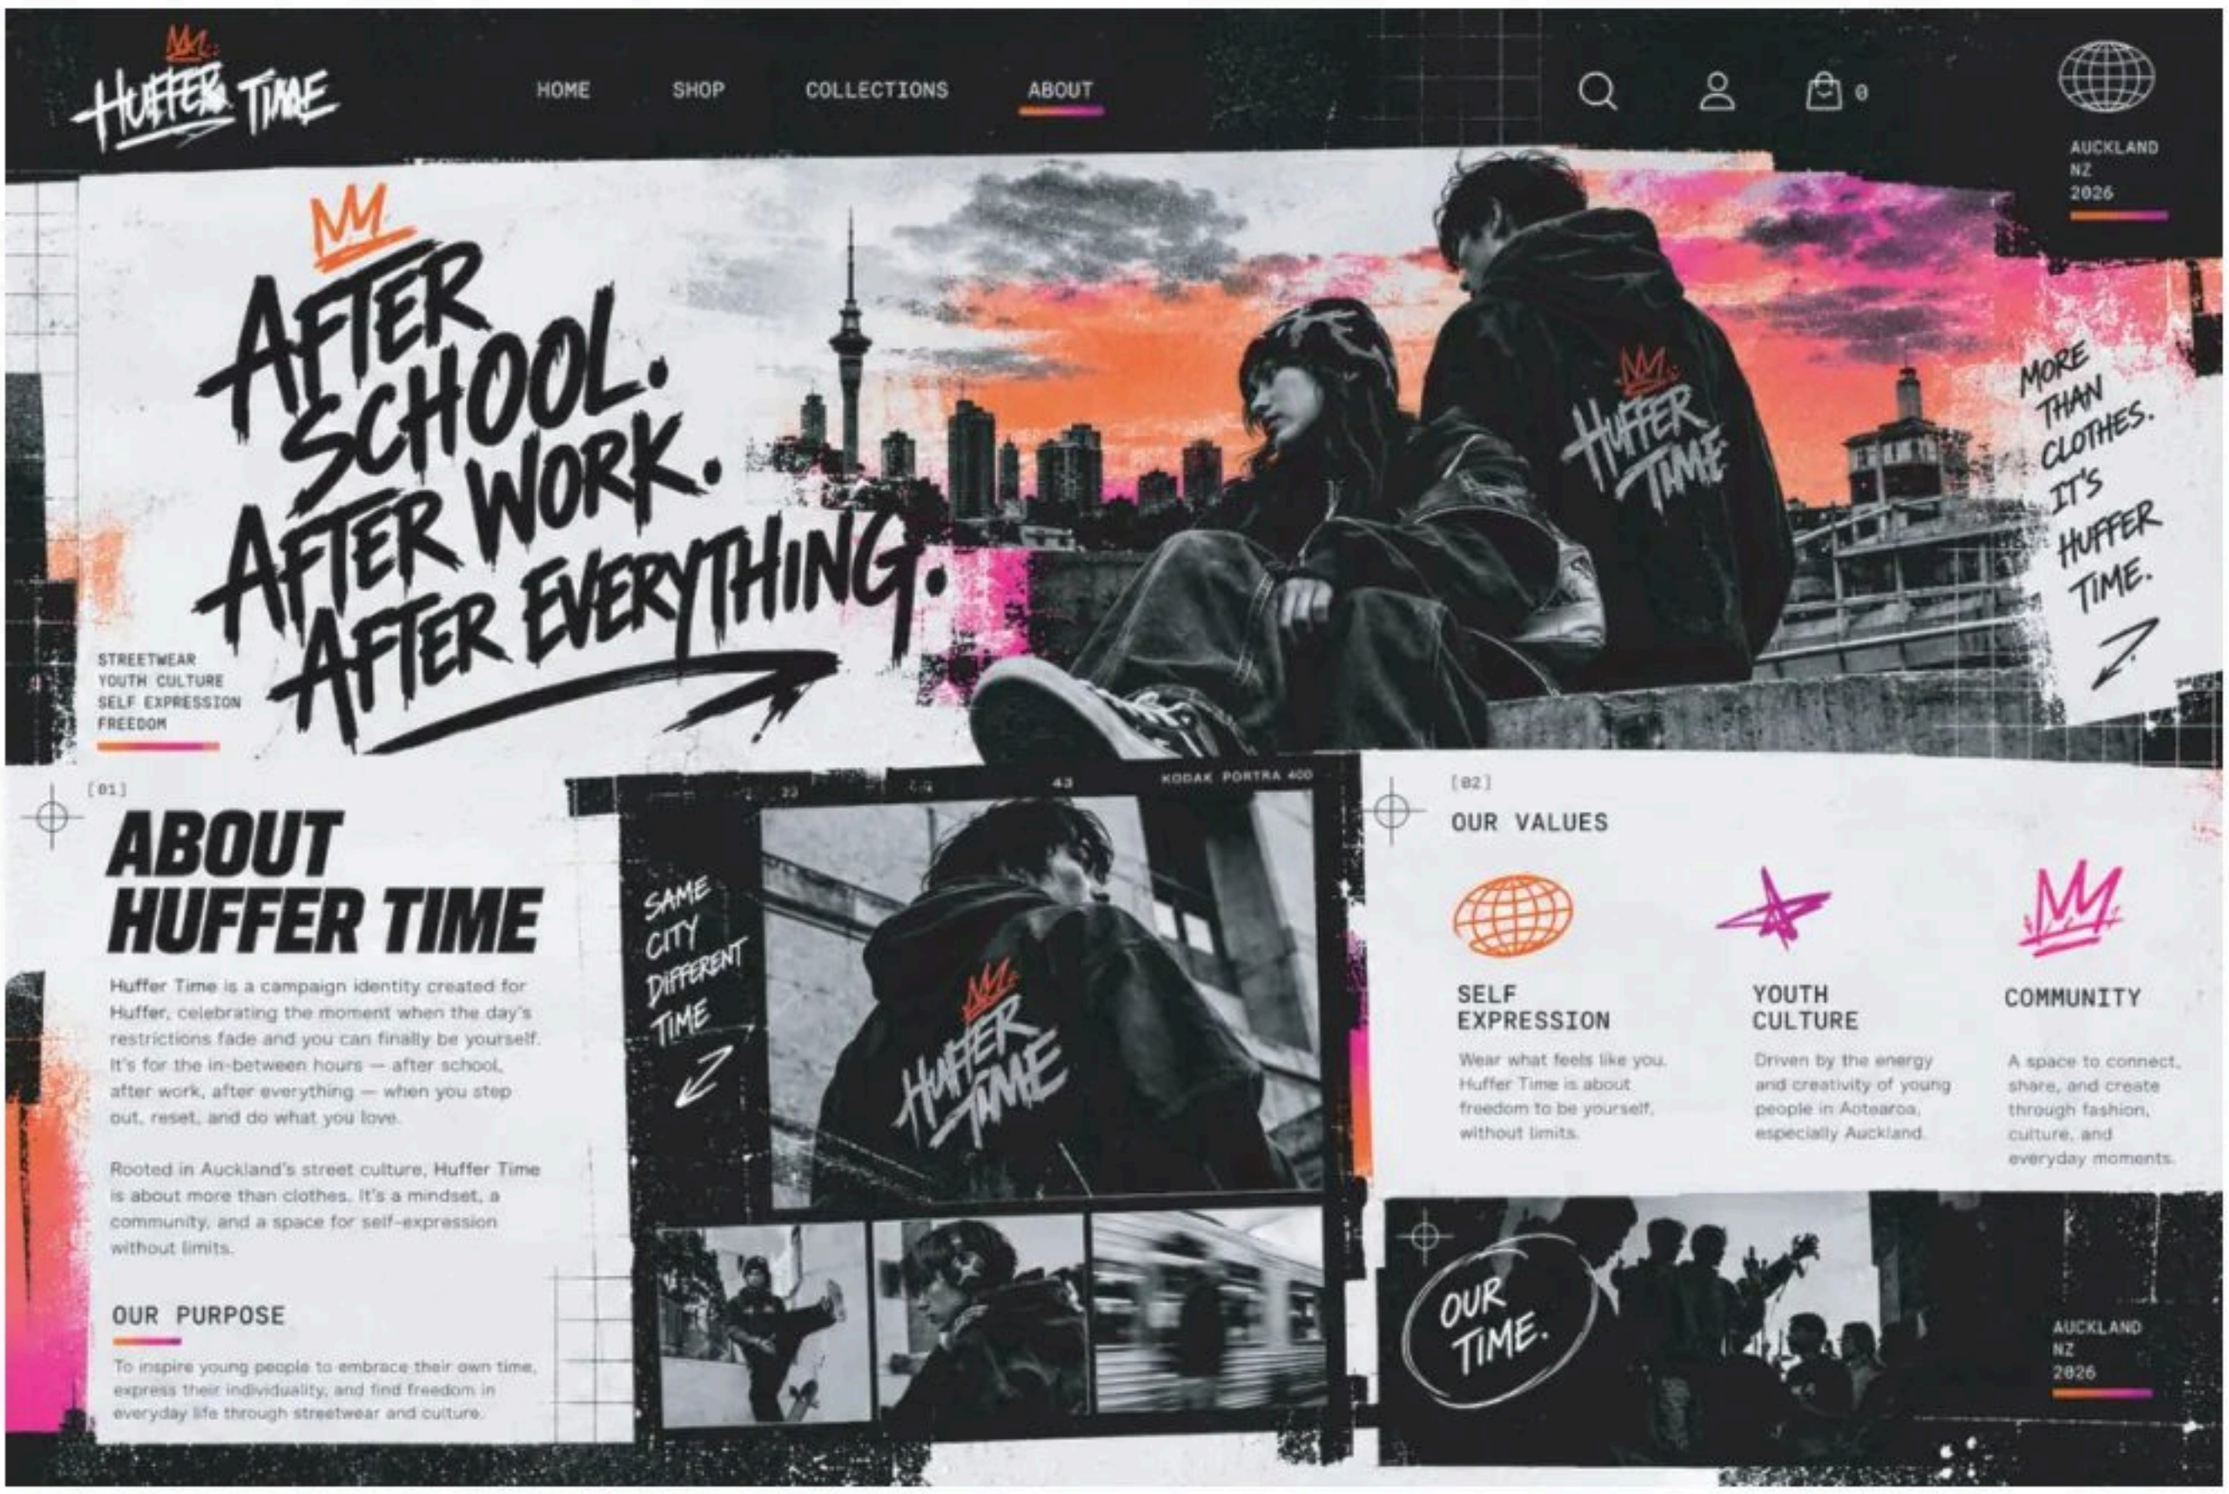

PRODUCT DETAIL PAGE

ABOUT PAGE DESIGN

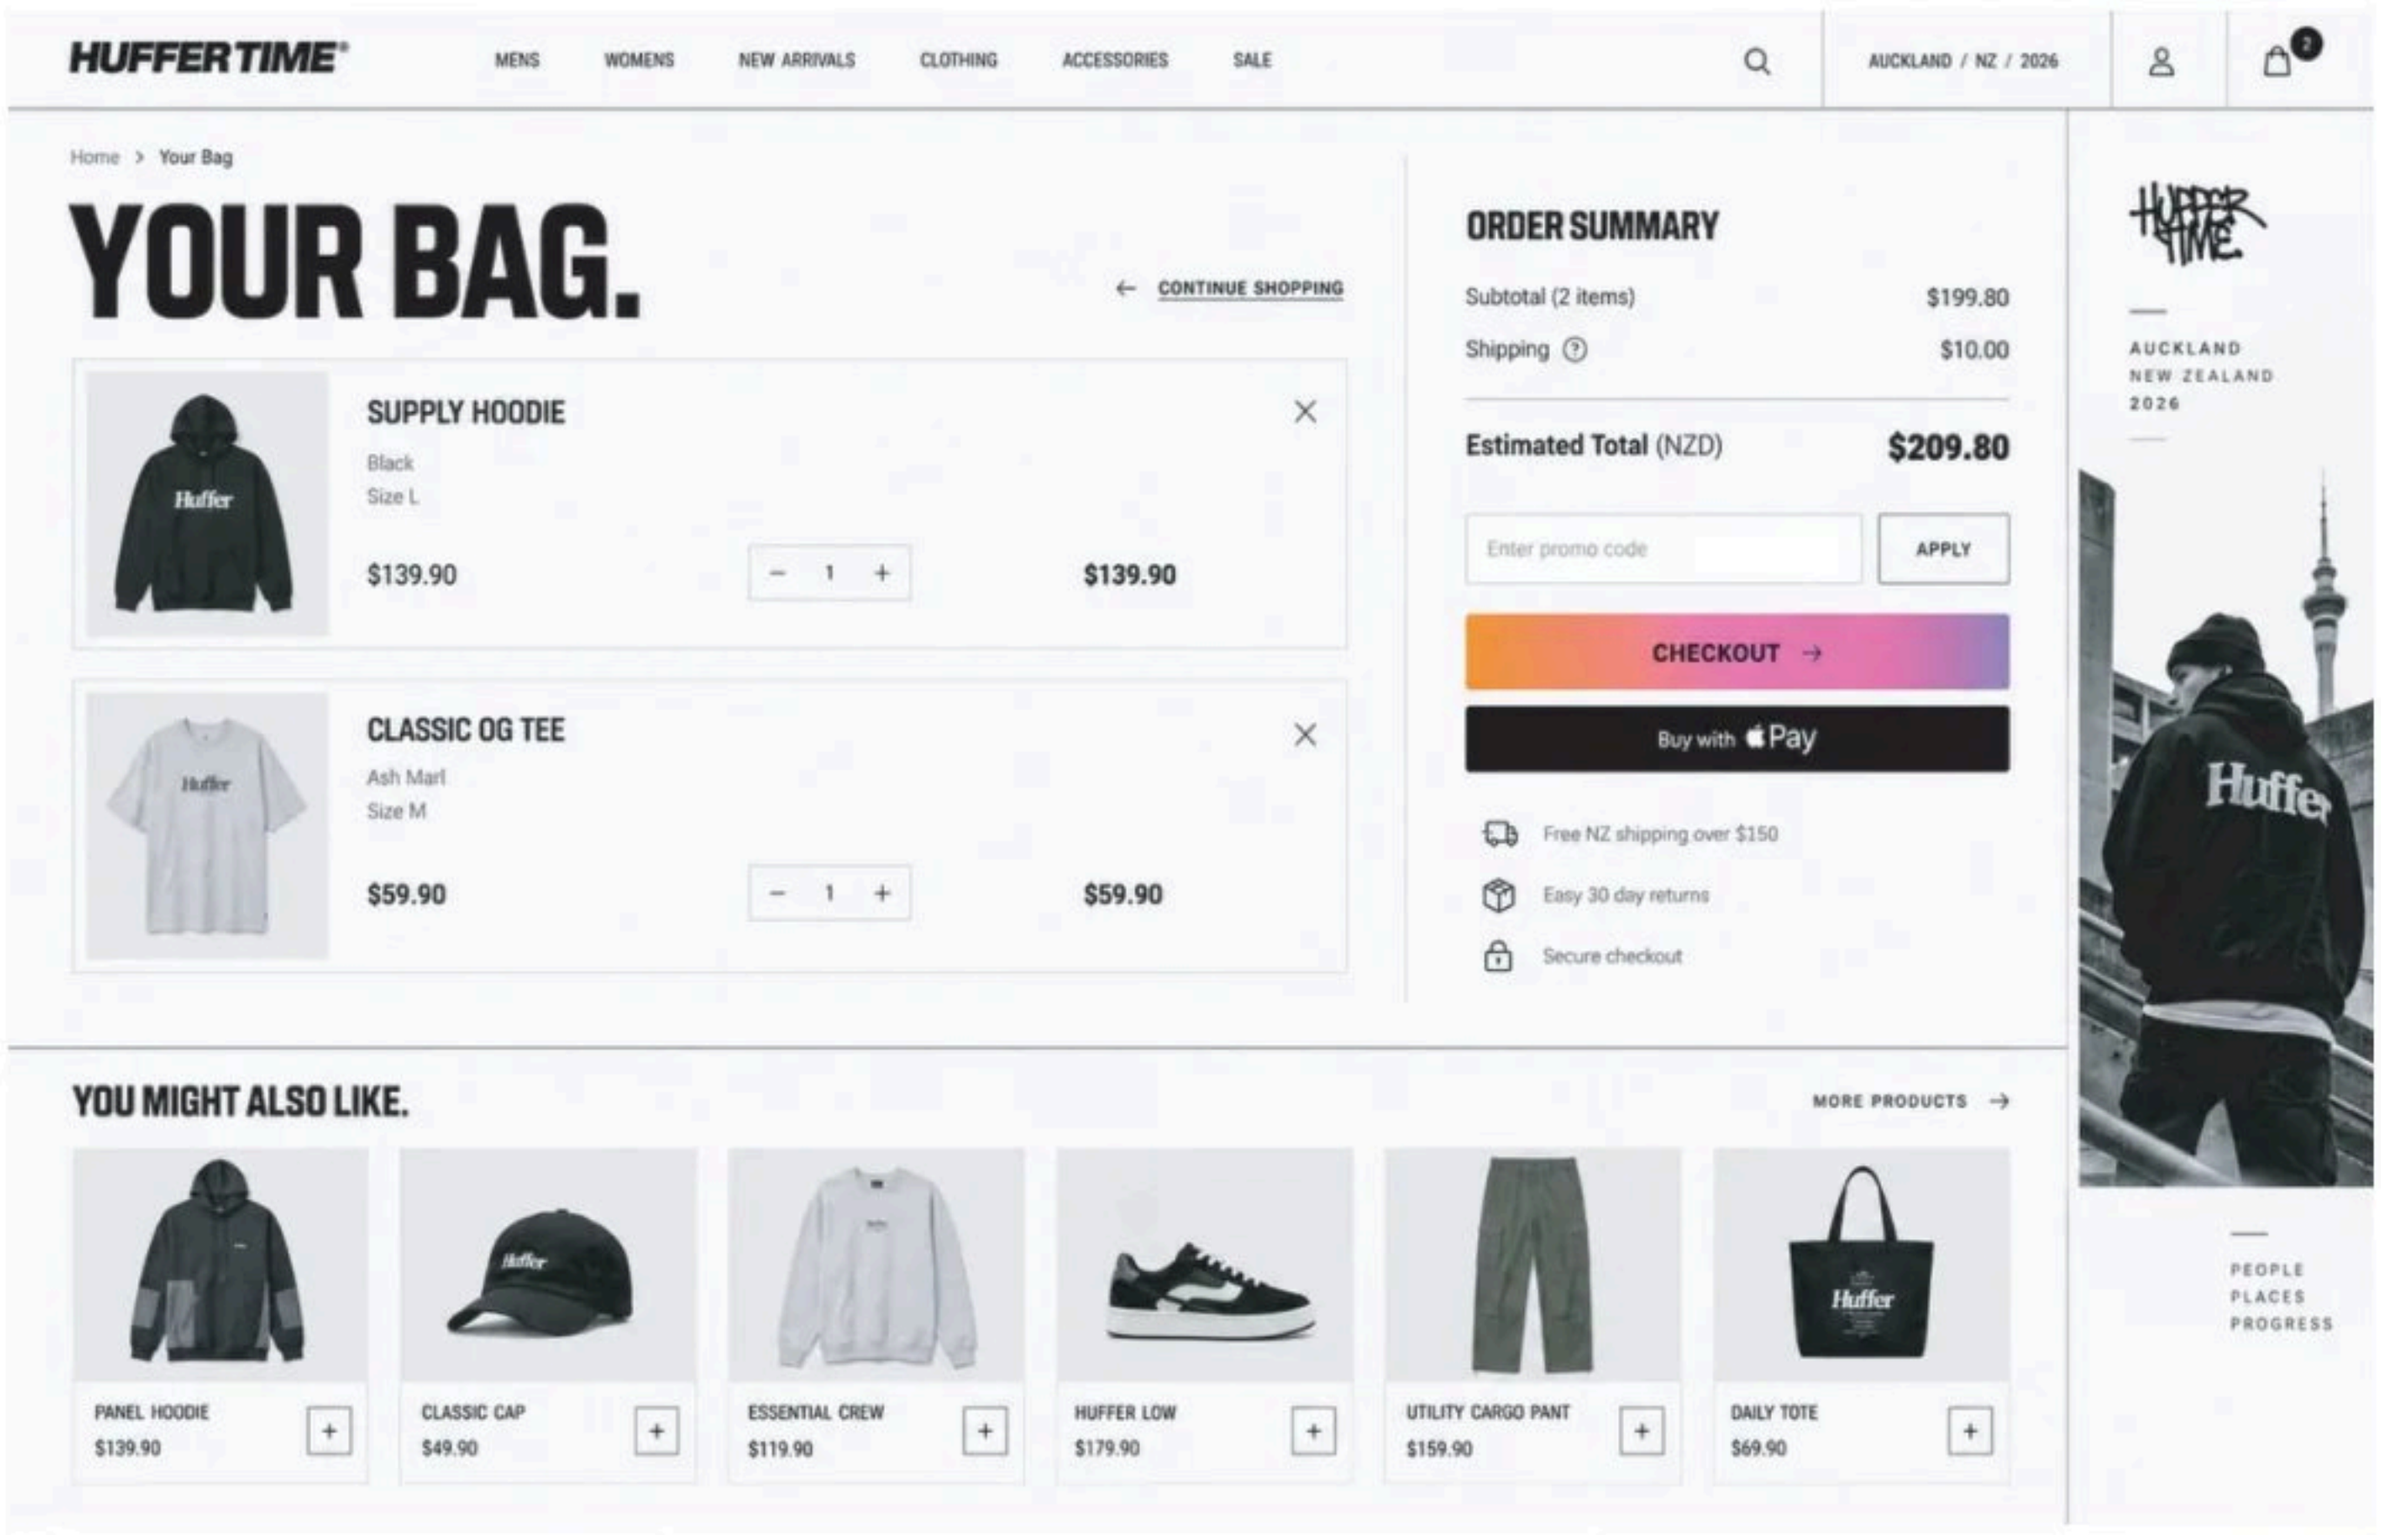

The About Page focuses on the story and values behind Huffer Time rather than promoting products. It introduces the campaign as a celebration of personal freedom, youth culture and the moments after school or work.

The page uses a collage-inspired layout, street photography and expressive handwritten typography to create a more personal and creative atmosphere. This approach helps communicate Huffer Time as more than a clothing campaign, but also a space for individuality and community.

- Brand Storytelling: The large campaign message and lifestyle imagery introduce the meaning behind Huffer Time and its connection to everyday life.
- Our Values: Self-expression, youth culture and community are presented as three key values, each supported by a different graphic symbol and short explanation.
- Visual Expression: Black-and-white photography, handwritten lettering and layered textures reflect the energy and creativity of street culture.
- Community Connection: The combination of personal stories and group imagery communicates a sense of belonging and shared identity.

CART PAGE

The Shopping Bag page focuses on the final stage of the shopping experience, helping customers review their selected items before checkout. Huffer uses a clean, structured layout to separate product information from the order summary, making it easier to check purchases and understand the total cost.

The design also provides a clear path towards checkout while allowing customers to make changes to their order.

- Order Management: Customers can review product details, adjust quantities or remove items directly from their shopping bag.
- Order Summary: Product costs, shipping fees and the estimated total are displayed together, helping customers understand their expenses before payment.
- Checkout Options: The gradient checkout button and Apple Pay option provide clear and convenient ways to continue purchasing.
- Product Recommendations: The “YOU MIGHT ALSO LIKE” section introduces related products, encouraging customers to discover more items before completing their order.

PACKAGING DESIGN

The packaging design brings Huffer Time from a digital campaign into a physical experience. Instead of using a traditional shopping bag or simple clothing box, Huffer Time introduces a more distinctive packaging design that reflects its streetwear identity and creates a memorable unboxing experience.

The exterior combines a black background with bold graphic elements, street photography and sunset-inspired colours. The Huffer Time logo is placed prominently across the packaging, while smaller details and graphics help create a stronger connection to the overall campaign.

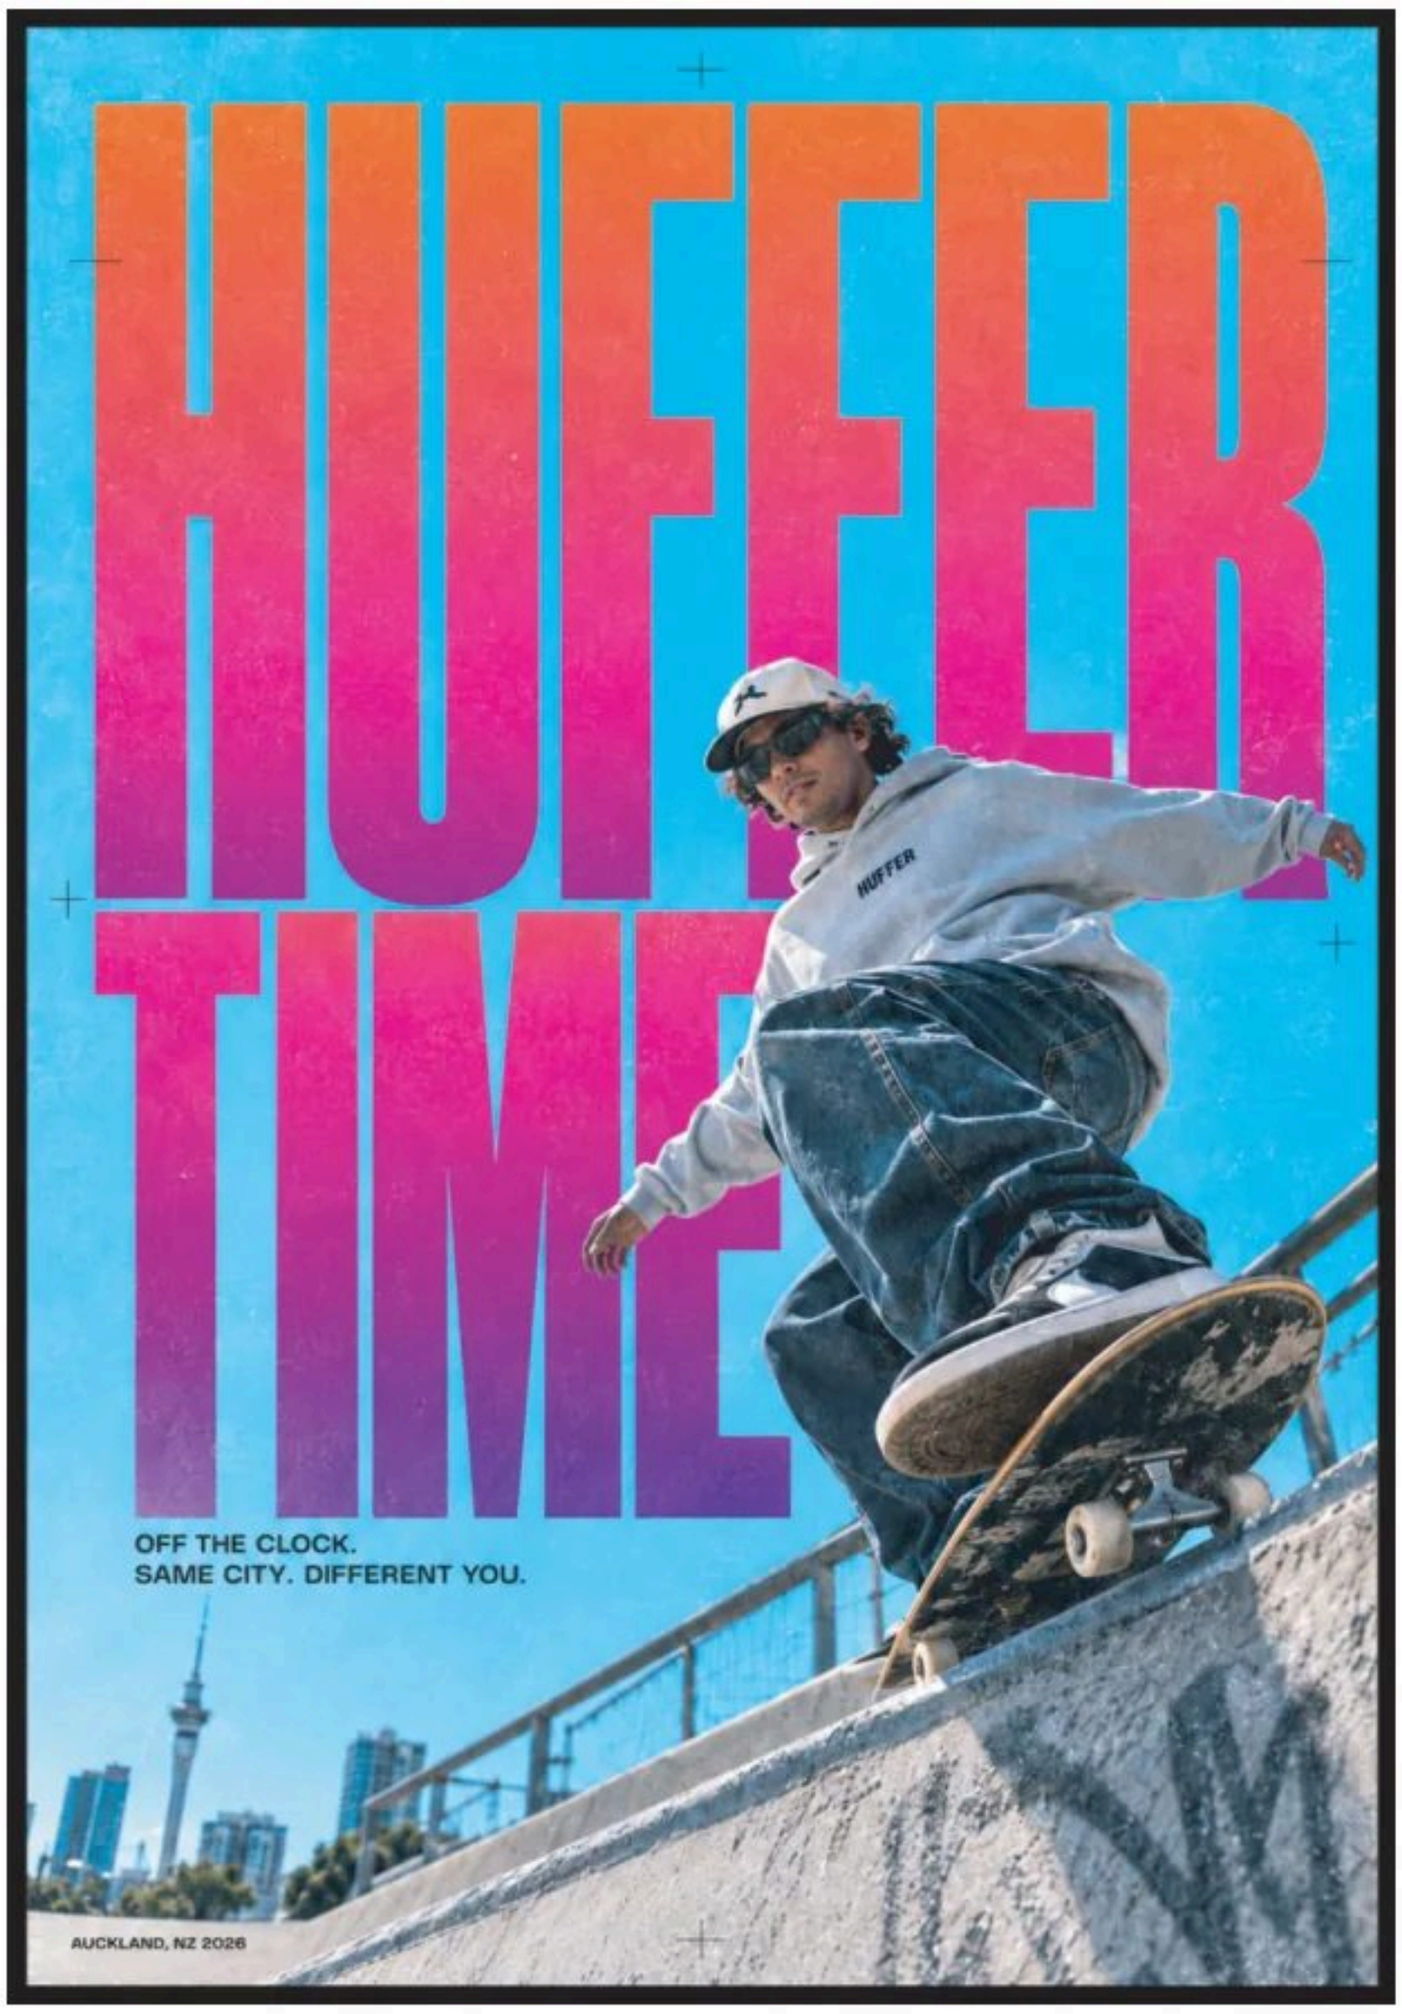

The box uses a foldable structure that opens to reveal the clothing inside. The contrast between the expressive exterior and the simpler interior keeps the attention on the product when the box is opened. This creates a transition from the bold visual identity on the outside to a more personal experience inside.

The design also considers how the packaging looks from different angles. By extending the graphics across the lid and sides, the box maintains its identity whether it is displayed, carried or opened. Rather than being discarded immediately, the packaging is intended to feel like part of the Huffer Time experience, adding more character and presentation value to the clothing.

ADVERTISEMENT DESIGN

This poster presents Huffer Time as bold, youthful and confident. The composition is built around the oversized "HUFFER TIME" typography, which immediately grabs attention and makes the campaign name the strongest visual element on the page. The gradient colour inside the letters adds energy and helps connect the poster to the wider visual identity developed across the project.

The low-angle skateboarding photograph introduces movement and attitude, showing Huffer Time as something active and expressive rather than static. The model's pose, clothing and urban setting support the idea of freedom after routine, while the clear blue sky creates a strong contrast against the large type and makes the whole poster feel bright and direct.

The line "OFF THE CLOCK. SAME CITY. DIFFERENT YOU." reinforces the campaign message by suggesting a shift from everyday roles to personal identity. Smaller text such as "AUCKLAND, NZ 2026" helps ground the poster in place, while the overall composition keeps the message simple, memorable and visually immediate. As an advertisement, the poster is designed to work quickly by catching attention first and then communicating the Huffer Time attitude through scale, contrast and motion.

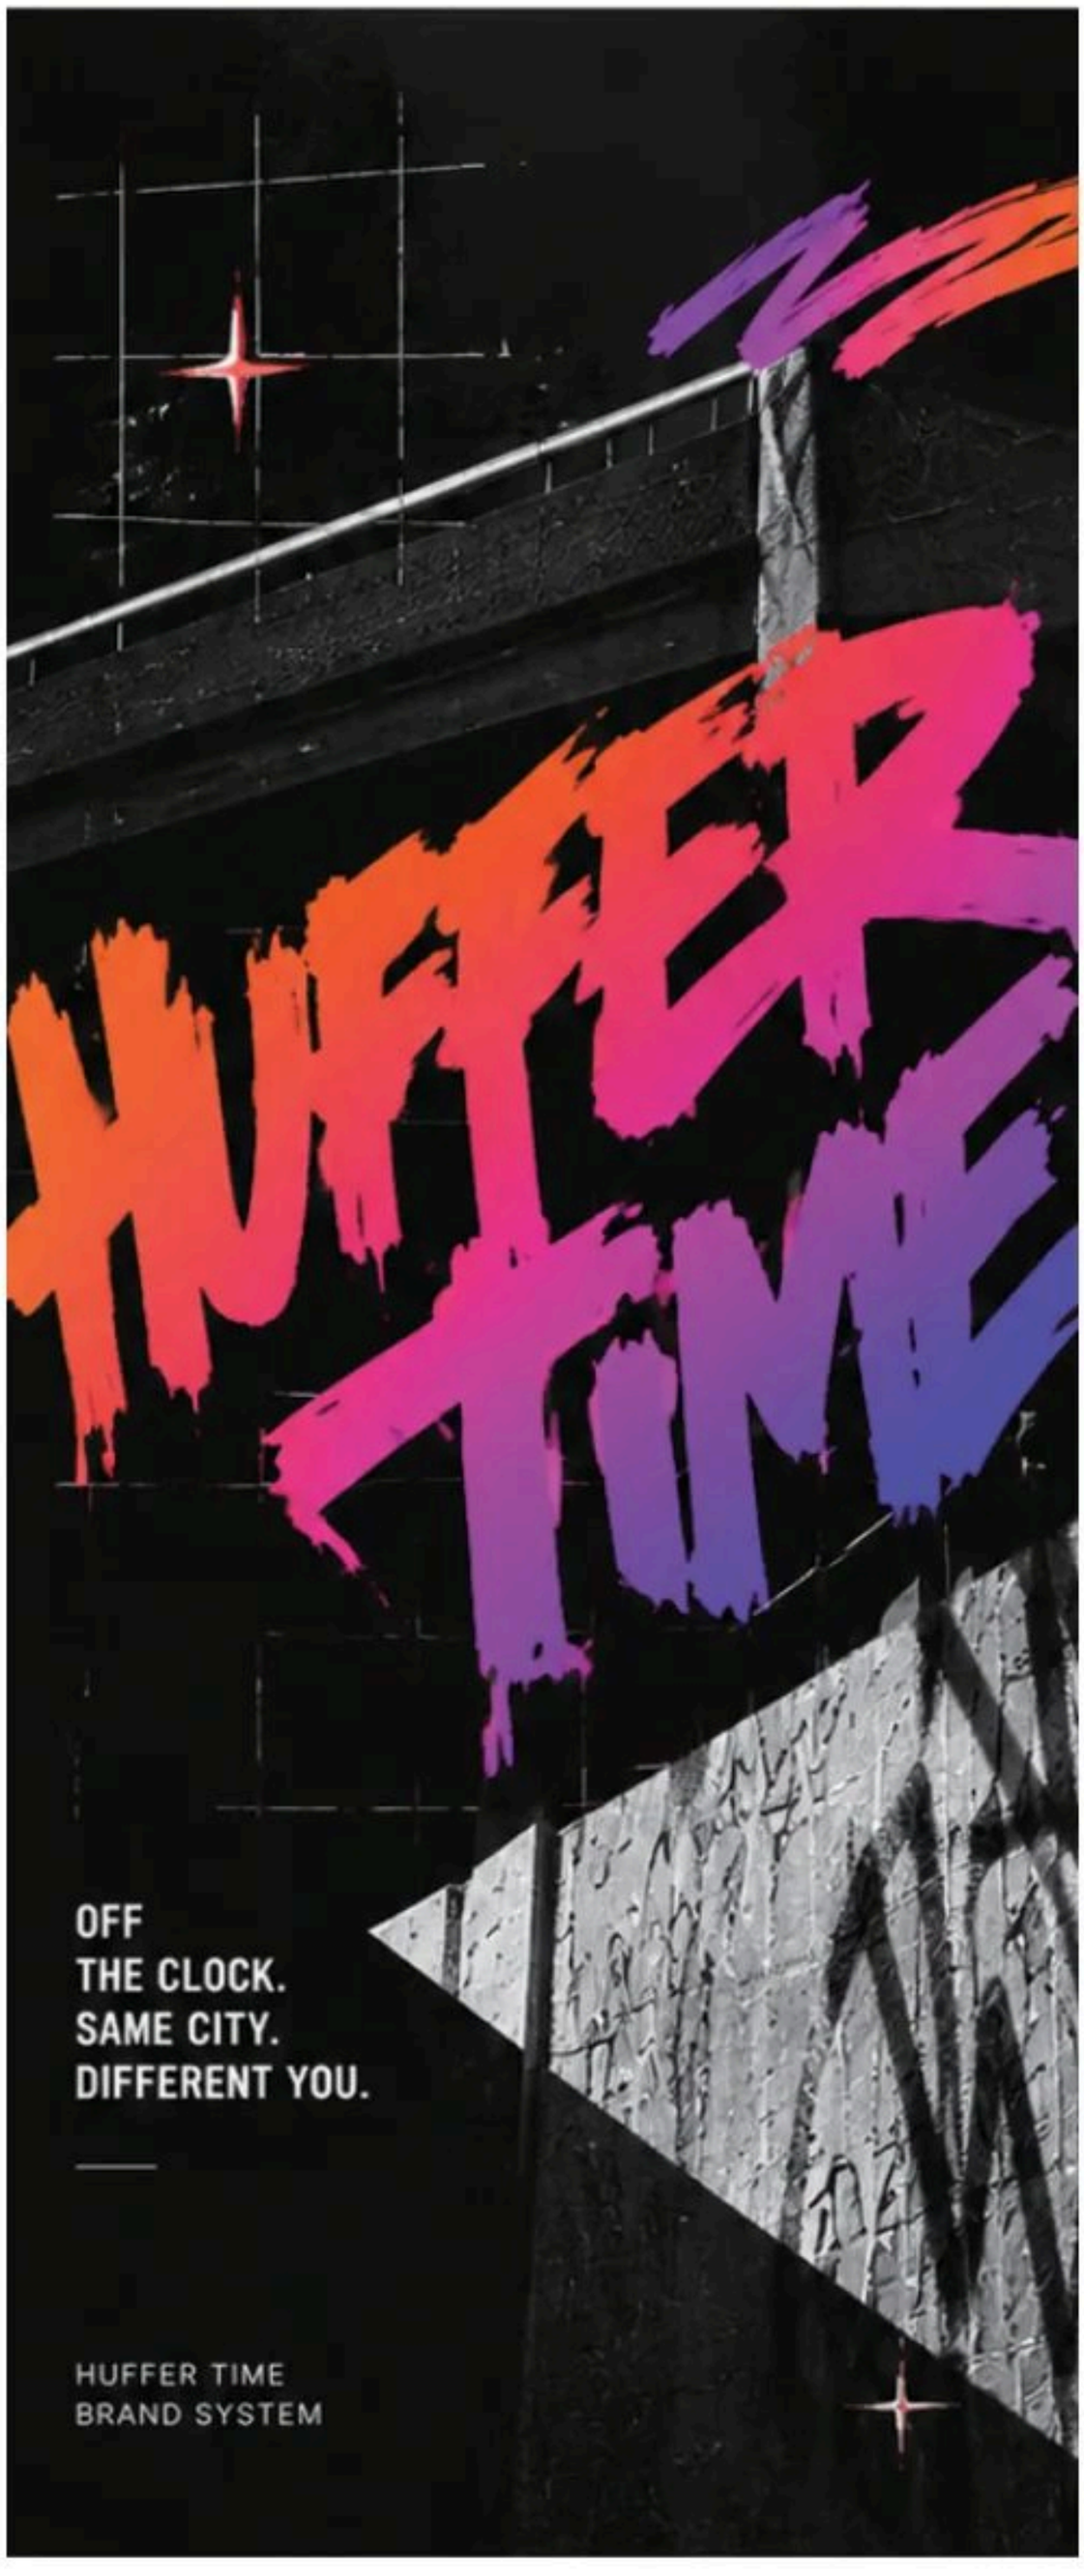

When displayed at a bus stop or inside a Huffer store, the poster immediately stands out through its bright colours, oversized typography and energetic skateboarding image.

The first impression is bold, youthful and full of movement. Even in a busy environment, the design quickly catches attention and gives people a sense of freedom, confidence and street culture, reflecting the attitude behind Huffer Time.

LIGHT **REGULAR** MEDIUM **BOLD**

Huffer Time maintains a recognisable visual identity across the online store, physical packaging and advertising poster. Although each outcome has a different purpose, they all share the same energetic and expressive streetwear direction.

The orange, pink and purple gradient represents the transition from daily routines to personal freedom, while bold typography creates a strong and confident visual presence. Street photography, graphic textures and urban elements further connect the designs to youth culture.

By applying these elements in different ways, Huffer Time creates a consistent brand experience without making every design look exactly the same.

KEY DESIGN DECISIONS

Establishing a Meaningful Campaign Direction

One of the most important decisions was to move beyond simply presenting Huffer as a streetwear brand. Huffer Time was developed around the contrast between daily responsibilities and personal freedom, reflecting how students and young workers often adjust their appearance to fit different environments. This gave the campaign a more relatable purpose. Instead of encouraging people to buy clothes simply because they look good, Huffer Time connects clothing with identity, self-expression and the feeling of finally having time for yourself. This direction became the foundation for the campaign's message, visual style and applications.

Creating a Flexible Identity Rather Than a Fixed Design

The development of the visual identity involved simplifying several early concepts. The original logo experiments included more complicated structures and decorative details, but these elements made the design harder to control and apply consistently. The final grid system provided a clearer structure, while the broken-grid elements introduced the idea of moving beyond restrictions. More importantly, the grid was not treated as a fixed graphic. Its colours and arrangements could change depending on the product or application, allowing the campaign to remain recognisable without looking identical everywhere. This made the identity more useful as a design system rather than just a single logo.

Understanding That Bold Design Needs Restraint

Huffer Time was intended to feel energetic, confident and visually striking, but the design process also revealed the limits of using too many strong elements together. Large typography, gradients, graphic shapes and imagery could compete for attention when placed in the same composition. The decision to remove unnecessary details was therefore not about making the campaign less expressive, but about giving its strongest elements more space to stand out. Refining the scale, spacing and placement of information helped establish a clearer visual hierarchy. This allowed the campaign to keep its bold streetwear character while becoming more deliberate and easier to understand.

Building a Campaign That Works Beyond the Screen

Another important decision was to consider how the identity would function in different real-world situations. A poster needs to communicate its message almost immediately, while packaging must work across several physical surfaces and remain visually connected when folded into its final form. A website requires a different level of organisation because people need to navigate and interact with its content. Rather than applying one composition to every format, Huffer Time adapted its visual system to each purpose. The final A3 poster was also printed on thicker, higher-quality paper to improve its physical presentation. These decisions helped turn the campaign from a collection of digital designs into a more practical and connected brand experience.

DESIGN REFLECTION.

Looking back at the Huffer Time project, I realised how much my thinking changed throughout the semester. At the beginning, I was mainly interested in creating something bold and visually exciting that matched Huffer's streetwear style. However, as I moved from researching the brand to developing the identity and finally applying it to different designs, I started to understand that every visual decision needed a reason behind it.

The process was not always straightforward. During the logo development, I explored different shapes, grids and typography before gradually removing elements that did not work well together. A similar situation happened when designing the website and packaging. I often tried several layouts before finding one that felt balanced. Sometimes I became too focused on adding interesting details and forgot how they affected the overall composition. This taught me that simplifying a design does not mean making it less creative.

Class feedback also helped me see my work from another perspective. My classmates appreciated the bold compositions, consistent identity and strong connection to Huffer's style. However, their suggestion to explore white backgrounds made me realise that I had become comfortable working with darker, more dramatic visuals. Although I kept my original direction for this campaign, I learned that a strong identity should also be flexible enough to work in different situations.

Printing my final poster on higher-quality A3 paper was another valuable experience, as it showed me how material choices could change the feeling of a design.

Overall, this project helped me become more confident in developing and refining my ideas. More importantly, I learned to question my decisions, consider feedback carefully and recognise when a design needs improvement rather than more decoration.
