Road Pal

Good trips start here

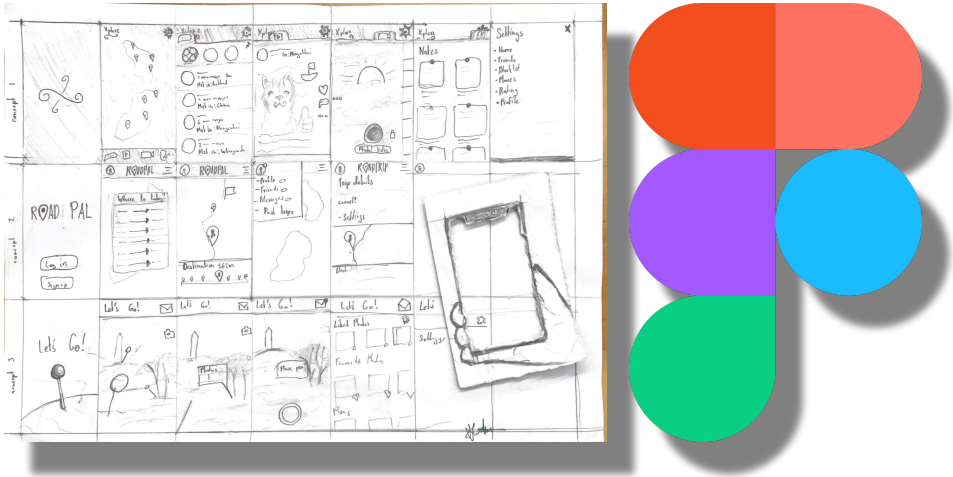

Design Innovation

Design Innovation Proposal

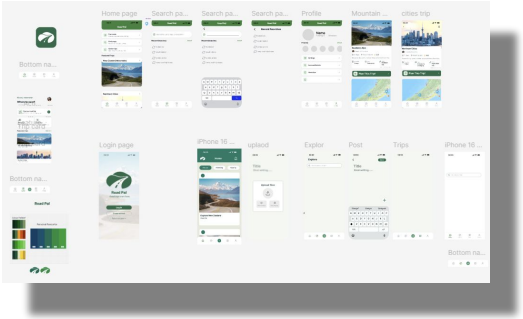

- Road Pal is a social media travel app that allows users to share, discover and go on trips planned by other users. We want to bring nature into social media and encourage people to connect more with environment around them while providing a space for like minded people.

Concept Rationale

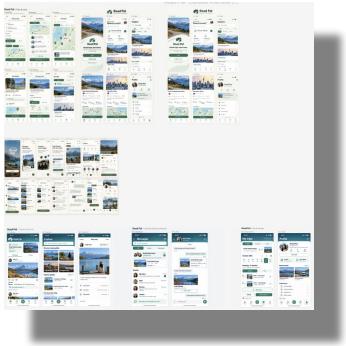

- In our initial planning phase, we had made an interactive diagram of the app using paper, where people could interact with the phone frame and slide it across different frames that act like pages. Going ahead, we decided to use Figma instead as it was less costly, faster, easier to work with, some of us has had experience with the software in previous assignments, and it was suggested to us during initial feedback.

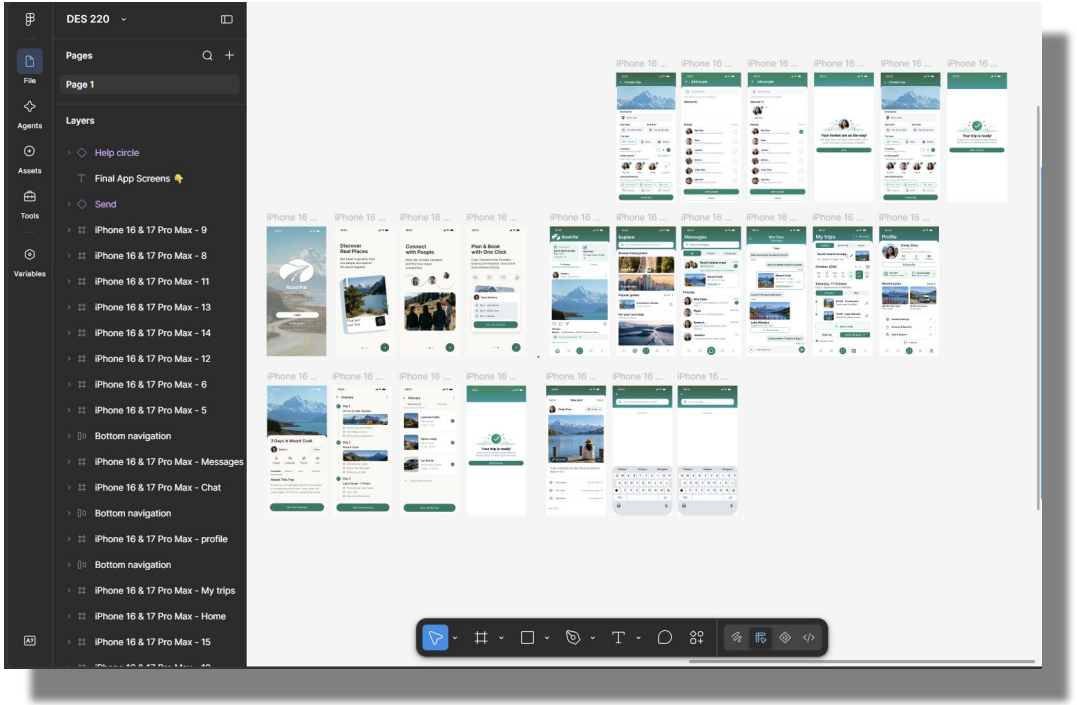

Prototype Development

First Iteration

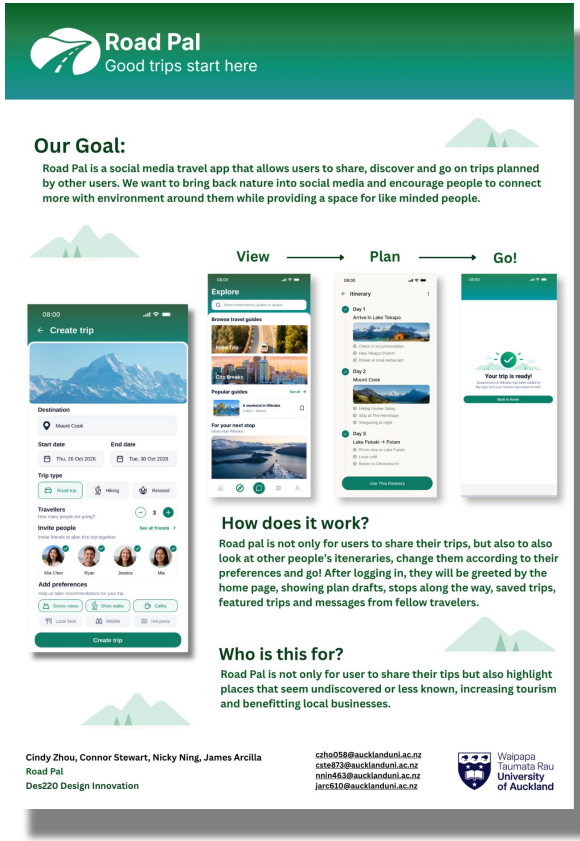

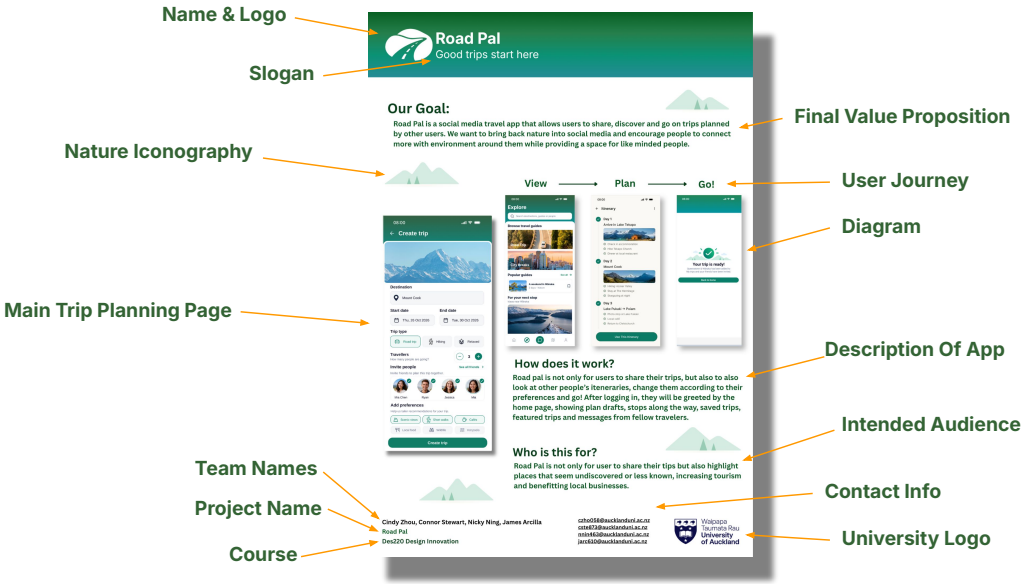

Ideation of different iterations, layouts, styles and images.

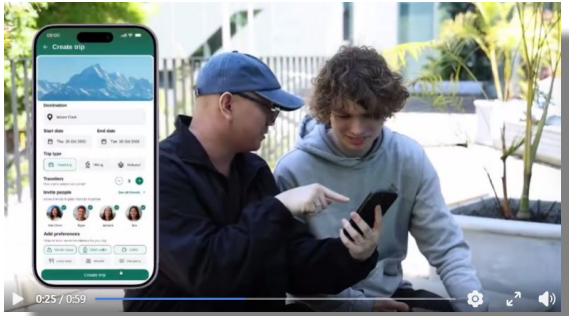

Final Iteration

Poster Communication

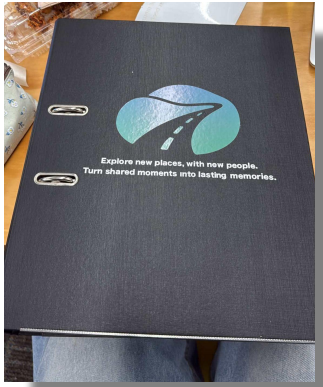

Visual Communication Materials

Promotional video explaining the app and showing how its used

Booklet. Guestbook for collaboration venue, used to collect quotes from users about their experience or for stamp collection

Green plastic table cover, same colour as our brand and makes our exhibition more eye-catching

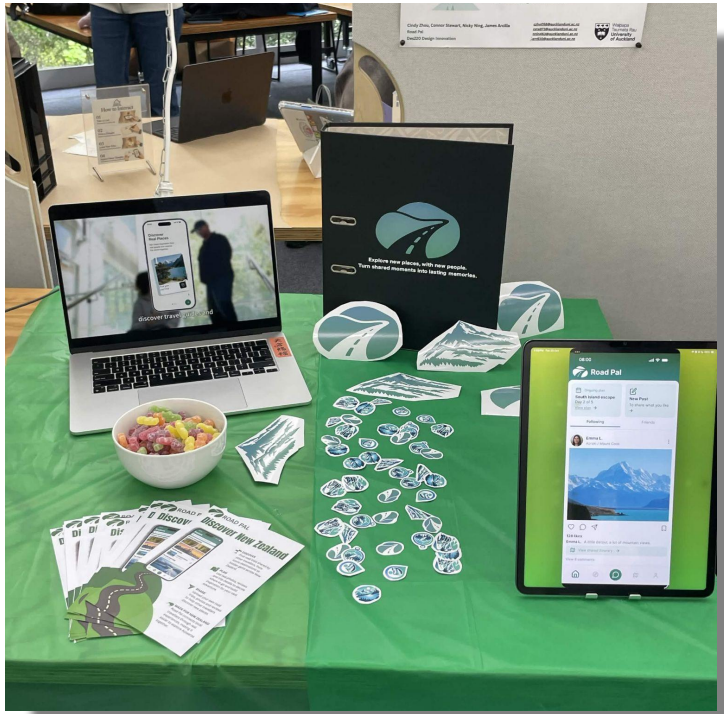

Promotional Stickers. Also helps Road Pal users identify other users

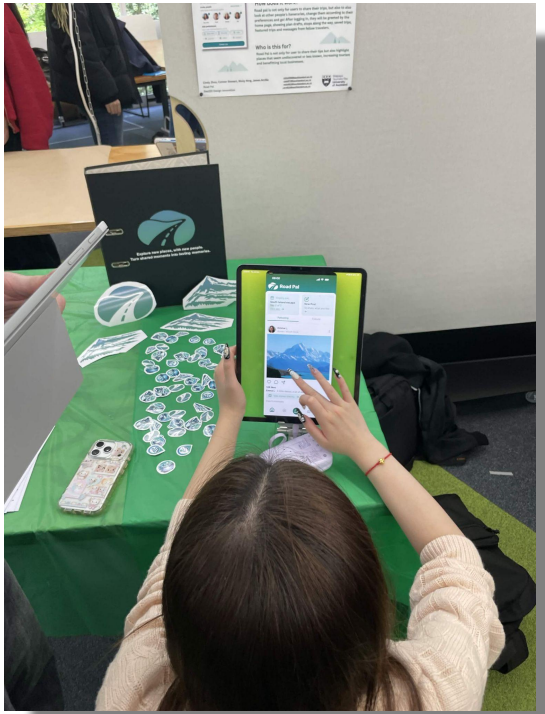

Informational Flyer

Exhibition Presentation

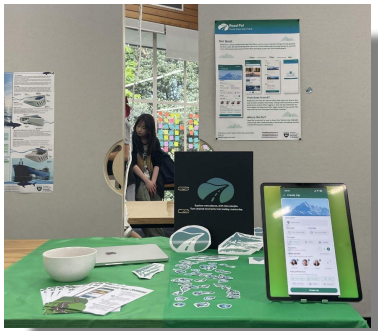

Exhibition Table

Classmate using the App

Team Photo with Exhibition

Exhibition with Poster
